#### **ACKNOWLEDGMENTS**

The 1983 NASA Ames SHARP student trainees are grateful to the many staff members at Ames Research Center who made this historic summer of scientific exploration and research possible. They took time from their busy schedules to offer assistance, information, and encouragement to 20 SHARP student trainees. An extra special expression of thanks goes to each Ames Research Center scientist or engineer (mentor) who worked on a daily basis with their assigned SHARP student trainee.

We acknowledge with appreciation the support given by the Equal Opportunity Programs Office, Graphics and Exhibits Branch, Photographic Technology Branch, Personnel Management Branch, Public Affairs Office, Publications Branch, Records and Reports Branch, Security Branch, and the Training and Special Programs Branch.

Special recognition must be given to all the staff members at NASA Headquarters in Washington, D.C., for the birth of this program and the work they did to transform SHARP from an idea into a reality. We particularly want to mention Curtis Graves, Roscoe Monroe, and Ken Wiggins, for their dedicated service on the national level.

Local participation here at Ames Research Center is so numerous we cannot mention everyone individually. However, we need to commend and be cognizant of Garth Hull, John Leveen, and Meredith Moore for providing special assistance in the selection process of the 20 SHARP student trainees. These three dedicated and devoted staff members provided helpful comments and suggestions, spent hours reviewing, evaluating, and critiquing SHARP, and serving as an advisory team throughout the entire program.

We must thank Tom Clausen, Bill Horvath, and Clarice Lolich for their work with SHARP and responsibility for the educational component of SHARP. We express gratitude to Mwezo Kudumu who coordinated a very enriching visits with Toastmasters Club No. 2624. The entire staff membership in the Training and Special Programs Branch must be commended for their teamwork and ability to coordinate all aspects of SHARP, sometimes with very short notice.

It is impossible to reveal in words the loyal service and commitment given by so many people to SHARP '83. So to each and every one who had any major or minor part in the SHARP '83 production we say, "THANK YOU!"

## SUMMARY REPORT OF THE SUMMER HIGH SCHOOL APPRENTICESHIP RESEARCH PROGRAM (SHARP) 1983

The space age has seen the frontiers of knowledge and technology extended beyond the wildest dreams of our forefathers. Today's science fiction will seem commonplace in the twenty-first century. The engineer of today and tomorrow will face incredible and fascinating challenges. SHARP has its purpose the goal of enabling women and minorities to be a vital part of the engineering team that will solve these challenges.

The function of SHARP is to recognize high school juniors who have demonstrated unusually high promise for success in mathematics and science. Students who were accepted to participate in this 10-week summer program earn as they learn. Twenty academically talented students who will be seniors in high school in September were chosen to participate in SHARP "83". Mentors were selected to provide students with "first-hand" experiences in a research and development environment in order that each student may "try out" his or her tentative professional career choice. The student trainees in SHARP made important and very significant contributions to the ongoing research here at ARC, as well as providing additional staff where needed. Some special features of SHARP included field trips to private industries doing similar and related research, special lectures on topics of research here at ARC, individual and group counseling sessions, written research papers and oral reports, and primarily the opportunity to be exposed to the present frontiers in space exploration and research. The long-range goal of SHARP is to contribute to the future recruitment of needed scientists and engineers.

Four years ago in October 1979, President Carter signed an Executive Order appropriating special funds for SHARP. President Reagan, recognizing the inherent merits of SHARP, gave it his seal of approval for continued success by re-funding SHARP. Pursuant to the President's directive, Ames Research Center conducted its fourth SHARP for minority youth.

This final report is a summary of all the phases of the planning and implementation of the 1983 <u>Summer High School Apprenticeship Research Program (SHARP)</u> for high school students at NASA Ames Research Center, Moffett Field, California. This composite report is in the format of a sectional directory of all the major developments, decisions, activities, and participants. It is not the purpose of this report to assess, evaluate, or make future recommendations for SHARP.

#### SUMMER HIGH SCHOOL APPRENTICESHIP RESEARCH PROGRAM

(SHARP '83)

Below is the program design for implementing SHARP '83 at NASA installations to expose approximately 150 youngsters to a research facility. The approach which follows maximizes the use of local resources, center resources, and existing NASA principal investigators at colleges and universities while minimizing the difficulty which students may have accumating themselves to a technical research environment.

The overall direction of the program is under the Deputy Director for Academic Services in the Division of Public Affairs at NASA Headquarters. At each field center involved in the program the Center Educational Programs Officer (CEPO) is designated as the "Center Liaison Coordinator" with the authority to direct the center programs activities and report to the Community Services Officer in the Educational Community Services Branch at NASA Headquarters. At NSTL which does not have a CEPO one of the aerospace specialists may be assigned to serve as a full-time liaison coordinator for the director of the SHARP program.

The first priority of the CEPO is to locate a faculty coordinator (FC) preferably a local high school teacher or guidance counselor with some experience in managing programs. It is recommended that the FC be a member of a minority group who is presently employed in a high school where some of the students will be selected. The second priority is to find NASA engineering or scientific mentors in the various laboratories of the Centers. These mentors, designated student advisors (SA) will usually be located at NASA facilities. However, the SA could be a principal investigator doing research on a college campus if the school is within a reasonable commuting distance for the student.

#### The FC functions are as follows:

- 1. Pre-select the students.
- Conduct orientation sessions relevant to their investigation into the center environment.
- 3. Interview each student to obtain information about their career goals, their expectations about the summer research program and judge their seriousness about the experience.
- 4. Talk to each of the prospective SA's about their responsibilities.
- 5. Conduct weekly report sessions to obtain information concerning the students involvement in the work of the student advisor.
- 6. Make the best marriage between a student and student advisor.
- 7. Arrange for spacemobile lecture demonstration workshops to be conducted the first and second weeks of the program.

- 8. Arrange follow-up lecture sessions with spacemobile specialist.
- 9. Handle problems on a day-to-day basis between students and the SA.
- 10. Work closely with the Center Coordinator to keep the program working smoothly.

The brightest students from local high schools should be selected not later than mid-April, 1983 from the local communities surrounding the designated field centers. We would suggest only students entering their junior or senior high school year because of maturity and stability. They must be U.S. citizens, who will be at least 16 years old by June, 1983. Our recommendation is that students should not be removed from their home environment because of logistical problems involving living, discipline, close school contacts, etc.). Sons and daughters of NASA personnel are not eligible for this program except at DFRF where OPM has approved a remote location exception.

At least two orientation sessions will be conducted on a Saturday to inform students about their responsibilities, prepare them for a highly technical work environment, better understand the aspirations of the students and introduce them to their student advisors.

The programs will begin as soon as school ends in installations areas. Students should work a regular 40-hour shift each week. The first two weeks of the program the students will alternate a day with the SA and a day of lectures by a spacemobile specialist on all phases of NASA research and development programs.

The intent of this is to give the widest possible exposure to the student in hopes of finding a research and development area which is of interest.

The third week should start the regular four-day research, one-day reporting and review cycle of activities. Each student will be required to make a presentation to his peers at one of the reporting and review meetings on the research which is being conducted in his/her assigned areas. The SA should be encouraged to attend the session involving his/her student and give feedback to the student after the presentation. Students should be encouraged to produce graphics, slides, reports, etc., which will enhance their presentation.

After the <u>successful</u> completion of the summer program the students should be encouraged to work on a part-time basis (not more than 20 hours a week) during the school year. If the student is entering his junior or senior year the program and exposure would have enough time to affect his aspirations, career choices, and help him to find a university which will fulfill his new goals.

We allocate the following distribution of 150 students among field centers based on local populations and availability of research opportunities:

ARC	- 20	LARC	- 15
DFRF	- 10	LERC	- 20
GSFC.	- 25	MSFC	- 15
JSC	- 15	NSTL	- 10
KSC	- 15	WFC	<b>-</b> 5

At those field centers where there is no Center Educational Programs Officer, a spacemobile lecturer will be used in this capacity.

#### FUNCTIONAL TIMELINE

#### 1. PLANNING PHASE

From now until the students are brought onboard plans should be made for the implementation of the program.

- A. Faculty Coordinators (FC) should be recruited but should not begin work before March 15, 1983
- B. Menters should be chosen and receive orientation regarding the goals and objectives of the program. A mentor is required for each student.
- C. Limited office space should be found for the FC. Meeting rooms for the groups' Friday meetings; meeting rooms for pre-employment as well as other orientation sessions should be obtained.
- D. Attempts should be made to work out any personnel problems which may evolve.
- E. A decision must be made about the beginning and ending dates for the program which do not conflict with regular school.

#### 2. EMPLOYMENT OF FACULTY COORDINATOR

The FC should have his/her work assignment well defined and plan to attend the SHARP 83 Planning Conference in Las Vegas, Nevada, April 5-7, 1983 which is being held in conjunction with the National Congress on Aerospace Education.

- A. Part-time employment of the FC could start as early as March 15, 1983. Up to 210 hours of part-time employment is possible.
- B. The Center Educational Programs Officer (CEPO) will decide when the FC becomes full-time and how long they are expected to work during the summer.
- C. The CEPO should arrange for a period of part-time employment in late August and September in order to properly evaluate the program and prepare a final report.

#### 3. RECRUITMENT OF STUDENTS

The FC should visit the schools and talk to principals and teachers to find the best applicants. Personnel has obtained a waiver from the Office of Personnel Management for the students to be recruited directly from the high schools without regard to their family's economic condition.

#### 4. PRE-EMPLOYMENT ORIENTATION OF STUDENTS

One or two Saturday meetings should be held with students during late May or early June to explain to students and parents the program and requirements. Attempts should be made to introduce the student to his/her mentor and fill out all paper work on each student so they can be brought onboard on your starting date.

#### 5. STUDENT WORK PHASE

The first two weeks of the program should be divided between lectures and all aspects of the NASA programs, research and development. This should be given by one of the Aerospace Education Services Project lecturers. The other half of the time would be spent with their mentors. A close relationship should exist between the FC and the student so that beginning adjustment problems can be worked out. From week 3 to the completion of the program students would work at their assigned stations Monday through Thursday, and have report sessions on Friday. Each CEPO should plan with the FC to present the best programs on each of these Fridays.

#### 6. STUDENT REPORTING PHASE

The last 2 or 3 Fridays should be devoted to reports by the students about the research he/she is involved. Each student will be required to make such a report before the end of the summer. Students should be encouraged to use any audio-visual or aids to better explain the research he/she has been exposed to. Where possible the mentor should attend his/her students report and give the student feedback (after the presentation) regarding their report.

#### 7. EVALUATION OF RESULTS

An evaluation is due at Oklahoma State University by September 30, 1983. The evaluation should be written by the FC with the concurrence of the CEPO. Part-time employment should be used for this purpose.

#### SUMMER HIGH SCHOOL APPRENTICESHIP RESEARCH PROGRAM

# THE AMES RESEARCH CENTER IS PLEASED TO ANNOUNCE THE 1983 SUMMER HIGH SCHOOL APPRENTICESHIP RESEARCH PROGRAM

Though engineering enrollments are on the rise in universities across the nation, the shortage of graduate engineers continues. Women and minorities will be significantly underrepresented in the engineering profession for many years to come. As one means of attacking this problem, the Summer High School Apprenticeship Research Program (SHARP) was created two years ago. Federal agencies with scientific and technological challenges of the future were asked to participate in a program designed to provide an engineering experience for gifted female and minority high school students at an age when they could still make career and education decisions.

The purpose of SHARP is to recognize high school juniors (women and minorities) who are U.S. citizens and who have demonstrated unusually high promise for success in mathematics and science through outstanding performance academically in their high school. Students who are accepted to participate in this summer program will earn as they learn. Each student will be required to work eight hours per day in a five-day work week. Some special features of this work-study program are weekly field trips, lectures, oral and written reports, and job experience in a field related to the student's career interest.

For more information about the Research Apprenticeship Program for high school juniors and for application forms, please write:

NASA AMES RESEARCH CENTER
Training and Special Programs Branch
Moffett Field, California 94035
Attn: Ms. Patricia Powell M/S 241-3
(415) 855-8298
(415) 965-5649

## AMES RESEARCH CENTER OFFICE OF THE COORDINATOR TRAINING AND SPECIAL PROGRAMS BRANCH

Announcing and acquainting you with our high school programs for students interested in engineering, mathematics, and science related fields.

I. Federal Junior Fellowship Program

Participants - Graduating high school seniors interested in engineering, computer science, physical science, mathematics, and statistics. For more information contact:

Ms. Meredith Moore M/S 241-3 NASA-Ames Research Center Training and Special Programs Branch Moffett Field, CA 94035 (415) 965-5624

#### II. Pre-Coop Program

Participants - Graduating high school seniors interested in work experience to earn money and gain on-the-job training in a field related to their vocational choice. The major areas for job placement are in engineering, mathematics, and science related fields. Interested students should contact:

Ms. Meredith Moore M/S 241-3 NASA-Ames Research Center Training and Special Programs Branch Moffett Field, CA 94035 (415) 965-5624

#### III. Summer High School Apprenticeship Research Program (SHARP)

Participants - SHARP is designed to provide an engineering and computer science related experience for gifted female and minority high school students. High school juniors who are U.S. citizens and in the top 10% of their class are eligible for SHARP. The person to contact for more information is:

Ms. Patricia Powell M/S 241-3 NASA-Ames Research Center Training and Special Programs Branch Moffett Field, CA 94035 (415) 855-8298 (415) 965-5649 Ames Research Center Moffett Lield, California 94035

Patricia Powell, Counselor and Employee Development Specialist

Summer High School Apprenticeship Research Program (SHARP)

The enclosed application packet is for a NASA sponsored program to encourage underrepresented minorities and females to consider mathematics-, engineering-, and physical science-related professions. Please promote awareness and encourage students from your high school who are juniors and U.S. citizens to acquire an application and mail the completed packet to me immediately.

Students who are accepted to participate in this 10-week summer program will earn as they learn. They will be involved in a 5-day week of 8 hours per day. This work-study program may continue during the school term if the student is interested and develops an interest in a project he or she would like to continue.

The Summer High School Apprenticeship Research Program (SHARP) will start on Monday, June 13, 1983, and end on Friday, August 19, 1983. An orientation session is scheduled for students and their parents on May 21, 1983, in the morning. You may report to work on June 13 or June 20, 1983 depending on when your school year ends.

Applications are due on March 15, 1983. Please return the completed forms to:

Ms. Patricia Powell NASA-Ames Research Center Training and Special Programs Branch M/S 241-3 Moffett Field, CA 94035

Applicants will be informed regarding their acceptance in SHARP between April 15 and May 1, 1983.

May I thank you in advance for your cooperation and support. I will expect to receive some application packets from your students in your school. Please feel free to contact me if you need additional information or clarification (415) 855-8298 or (415) 965-5649. I am available to visit your school and talk to interested students about SHARP.

Patricia Powell

Schedule for Individual Conferences with Clarice Lolich

July 18-21, 1983

The following schedule has been arranged for you to discuss your oral reports and research paper. Please have as much of the content of your paper as you can complete at that time. The finish copy of your paper is due on August 1, 1983. Please deliver your research paper to Patricia Powell on Monday, August 1, 1983. Clarice Lolich will critique each paper and contact you regarding her commentary. Any suggested changes or corrections must be done before August 15, 1983. The final copy of your research paper must be turned in to Patricia Powell on Monday August 15, 1983.

Please get in touch with me if you have any questions. Please inform your supervisor that you will be away from your work site at the time indicated below for this conference to review your research paper and oral reports.

# STUDENT EVALUATION OF SUMMER HIGH SCHOOL APPRENTICESHIP RESEARCH PROGRAM

Directions: Write in the space provided your response to the questions and statements concerning your participation in SHARP "83."

- What do you consider to be the most rewarding activity of the summer workstudy program? Why?
- Briefly describe a problem encountered by you as a participant. How did you resolve the problem?
- 3. What changes (if any) would you recommend for the program if it is continued? Why?
- 4. How has this experience helped you?
- 5. Additional comments concerning the program.
